(54) SEPARATION ANALYSIS DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an easily-handleable and space-saving type separation analysis device wherein processing of a pipe such as a reagent supply pipe or the like can be executed simply within the shortest distance.

SOLUTION: This device is constituted by piling, from the bottom in the mentioned order, a power source unit 201 for controlling the electric power supplied to the whole device, a liquid sending pump unit 202 for storing a liquid- sending pump 12, and sending the reagent which is a mobile phase explained in figure 1 in a reagent solution bottle 210 to other units, an auto-sampler unit 203 equipped with a sample syringe and a sample tray, a column oven unit 204 for storing plural columns 15, and keeping the columns at a fixed temperature, a detector unit 205 for storing a lamp as a light source used for detection and a detector, and a bottle stand unit 206 for housing plural bottles 210 for holding the reagent.
